## **DETAILED ACTION**

## Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6 and 14-19, drawn to a method of use involving delta-sleep inducing peptide to regulate anaesthesia.

Group II, claim(s) 7-8, drawn to a method of use involving a compound that decreases deltasleep inducing peptide activity.

Group III, claim(s) 9-13 and 20-21, drawn to a method of evaluating anaesthetic need involving an assay to detect the presence of delta-sleep inducing peptide.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature is delta-sleep inducing peptide, which is a known compound (see USPN 4,496,545: column 1, lines 10-15). Since no special technical feature exists, there is no unity of invention. The remaining special technical features of the remaining groups are distinct as described above.

Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
